

Louisiana

An early washable multipurpose ware potato

Breeding Station of Comité Nord, France

Registered in 2007 in France

Characteristics of the variety

Crossing Concorde x (Agria x Hybride)

Maturity Very early (90 days), good tuber setting

Tuber shape Oval to long oval

Color yellow skin and yellow flesh,
very superficial eyes

Dry matter 17 to 19 %

Culinary quality No disintegration after cooking.
Good for all types of cooking: stem,
boiling, home french fries

Culinary group AB

Dormancy Short

Diseases

Susceptibility Susceptible to foliar late blight
Very low susceptibility to common scab
whatever the soil types

Resistance Nematod *Globodera rostochiensis* RO1-4

Technical advice

Plantation Plant deep enough to avoid the
greening of the tubers

Nitrogen 170 u / ha
(take into account the soil content)

Recommended plantation density :

Size	Density /ha
28/35	44.000 plants /ha
35/45	36.000 plants /ha
35/55	32.000 plants /ha

Harvest

- It is highly recommended to burn the leaves when crop is mature. Harvest 15 days after burning the leaves to get a thin nice skin set. Avoid the shakings with the harvest machine and maintain a light cushion of fine soil to avoid the shocks.

Storage

- Early variety to commercialize at the beginning of the season, good storage until january.
